

Problem Solving and Search in Artificial Intelligence

Summer semester 2026: Assignment 3

Nysret Musliu

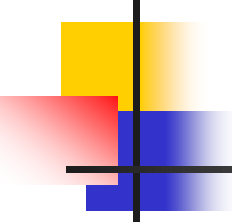

Ida Gjergji, Lucas Kletzander, Felix Winter

Databases and Artificial Intelligence Group
Institute of Logic and Computation, TU Wien

Techniques

- Solve the problem from assignment 1/2 by hybrid techniques:
- The hybrid technique should combine the exact methods (as in assignment 1) with heuristics
 - We recommend using a Large neighborhood search approach
 - Utilize the exact method to solve sub-problems
- You can use any programming language, but you should implement the techniques yourself
- Experiment with different parameters or apply an automated algorithm configurator (see lecture slides)

Schedule

- Submission deadline: 05.07.2026
- Individual discussions afterwards
- You should submit in TUWEL a zip file with:
 - Your source code
 - Presentation slides that includes
 - Description of your algorithm
 - Experiments/Selection of parameters
 - Results for benchmark examples. Average results, best result and standard deviation over 5 runs should be reported for each instance.
 - Conclusions/lessons learned
 - Instructions how to run your program
